1960年 (昭和 35)
Technique 1
Technique 2
Technique 3
The Kamakura Daibutsu (Great Buddha of Kamakura) was built in the middle of the Kamakura period, seven and a half centuries ago.
In 1960 a program was established by Kotoku-in temple to conduct major repairs of cultural assets. Fortified plastic ERP was applied to the neck in order to reinforce the head of the statue, and a stainless steel plate was inserted between the statue and the pedestal on which it rests as a means of protecting the statue against earthquakes.

I AM ONLY
Doing

The SCIENZ method
SCIENZ : Scientific Investigation of Essential Nature＋Zero
Exploration from the zero point without fixation and stagnation, "what is the truth?"
1. Consciousness of differences between humans' ideas and facts or truth
2. Concern to the fact and truth
3. Investigation into the essential and intrinsic nature
4. Realize the ideal
The SCIENZ method:
The consistent way of thinking from "getting to know human beings" up to "realizing the society" in which each person can live humanly.

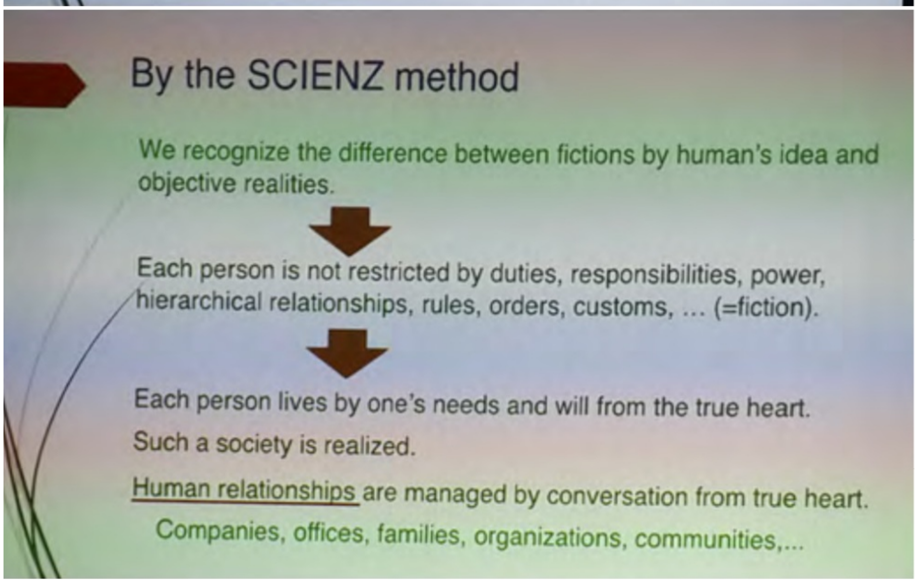

By the SCIENZ method
We recognize the difference between fictions by human's idea and objective realities.
Each person is not restricted by duties, responsibilities, power, hierarchical relationships, rules, orders, customs, … (=fiction).
Each person lives by one's needs and will from the true heart.
Such a society is realized.
Human relationships are managed by conversation from true heart.
Companies, offices, families, organizations, communities,...
